Many people are not yet aware that today there are several ways to spy on a phone without remote installation. While some people know spyware as a way to spy on a phone remotely, few people still know that a few can be used without installation. Yes, sophisticated and innovative spyware like Spyfer can be used to spy on a phone without installation. So you won't need to install Spyfer on the target's phone to be able to monitor your loved ones. You have the possibility to activate Spyfer on the phone you want to spy on from your phone or computer. Spy now online > SPYFER, A SPYWARE WITHOUT INSTALLATION Revolutionary, Spyfer is currently an indispensable tool for spying and remote surveillance. The software offers many features that can allow you to spy on any phone, whether on iOS or Android. However, spyware doesn't stop there because it can be used without installation on the target's phone, for all those who can't get the phone to spy on... REMOTE PHONE SPYWARE As a remote phone spy software, Spyfer allows you to spy on phones that are miles away from us. We don't need to have the target's phone in our hands all the time to look at what's in it. With Spyfer, you can see everything that happens on another phone without it being in our hands... Spy now online > USE SPYFER TO SPY ON A PHONE WITHOUT ACCESS Want to spy on a phone remotely when you have no access to it? In fact, you do not know the decryption scheme of the phone or its code and you have a lot of trouble to get it... In this case, Spyfer offers you a solution that allows you to spy on a phone without access. Without knowing any password, you can enter the target's phone and take a look at everything that is going on... WHY SPY ON A PHONE WITHOUT INSTALLATION? When you want to monitor someone else's phone, it's still not easy to get it to install a free spyware like Spyfer. Because of this, many people abandon the idea of spying on a phone remotely. However, spying on a phone is proving to be an additional means of protecting loved ones, especially children, from harassers, kidnapers and other malicious individuals. If you couldn't access the phone you want to spy on, don't give up spying right away, especially when it comes to protecting your loved ones. Instead, use spyware without installation. Yes, this type of software exists and allows you to access all data on the target's phone without the need to install. Spyfer spyware is part of this type of monitoring program. Indeed, although Spyfer can be installed on the target's phone, you can also use it without installation. SPY A PHONE WITHOUT INSTALLATION: GO FOR REMOTE PHONE SPYWARE Your child has gone on a trip and you forgot to install a spy app on his phone? You wanted to know the data stored in your spouse's laptop, but you don't know any of his passwords? You want to know what your employee is doing with his or her phone, but for now, you're too far away? No problem! With the advance of technology, you can now spy on a phone without installing a specific software... In fact, there are already many ways to spy on a phone without access. Just do a little internet search to see some examples. So, among all these methods, we advise you to opt for spyware without installation, which remains the safest way to spy on a phone that you have no access to. If you want to learn a little more about how to spy on a phone without installation, please continue to read. How can you spy on a phone without installation? When sorting through the different ways found on the internet, there are two ways to spy on a phone without installation. For starters, there are the video tutorials that are most often found on YouTube. In most cases, these tutorials are developed by professionals who are already used to manipulating complex software and encoding to spy on a phone without access. If you are not a professional in the field of remote espionage or in the field of computer science, you can easily get lost by following these tutorials. In fact, many of these tutorials take us to sites that offer us either paid and expensive software, advertisements, or worse, viruses in our computer. You should therefore be very careful when deciding to follow the path dictated by the video tutorials. Make sure that the channel or account that broadcasts the video is completely reliable. Spy now online > There is a reliable program You can spy on a phone without installation thanks to a spyware. Yes, some spywares can be functional even if you do not install it in the target's phone. This is the case, for example, with the Spyfer surveillance program. This free spyware allows you to spy on a phone without access, without installation and remotely. By using Spyfer, you no longer need to get the phone of a loved one, child, spouse or employee to know what they are doing. Be careful though, because some steps must be taken to convert Spyfer into spyware without installation. What is a spyware without installation? More specifically, what exactly is a spyware without installation? Spyware is an algorithm developed by developers that is used to spy on and access the content of a remote electrical device, usually a phone. A spyware can be installed as software on your computer or as a smartphone app. State of play Currently, a spyware has many features that help us know what the person we want to spy is doing: phone geolocation, spying on phone calls and SMS messages, monitoring social networks and internet activity, Tinder etc. Typically, a spyware needs to be installed on the target's phone before it can be activated. However, thanks to advances in technology, some spywares can be used without touching the target's phone. And it is these types of spywares that are called spywares without installation. How does remote phone spyware work? Spyware without installation is used differently depending on the operating system of the smartphone you are spying on. If the target's phone is an iOS smartphone, i.e. an iPhone, you have the option to spy on the phone without installing. To do this, get the phone owner's Apple ID and password. Then, install Spyfer in your phone or computer and set your account to yourself. After that, go to the Spyfer app or website and log in to your account. Then go to your personal control panel and enable monitoring of the target's smartphone by inserting the Apple account ID and password. With this username and password, you will have access to iCloud and thus all the data and activities performed on the phone to be monitored. Spying on a phone without access seems more difficult on Android smartphones, but it's not impossible... On Android, you won't have an ID or password to know. You must therefore indirectly push the owner to install Spyfer in his phone. Same for Samsung phones. How? By asking him to click on an installation link. For example, send your spouse or child a photo or video by email. With this file, include the installation link. If the person you want to spy is not suspicious, they can click on the link without knowing anything. So Spyfer installation will start on the target's phone and you could monitor everything from your own phone. Spy on a phone without access: Spyfer benefits Spyfer has many advantages when it comes to phone spying. First, the software is free. You can then test remote monitoring without having to spend money, as you usually do with other softwares. Second, Spyfer offers many features to spy on a phone remotely. In fact, you have the possibility to see where the target's phone is, to read emails, messages and private messages on social networks, to filter calls, etc. Third, Spyfer offers another alternative to people who cannot access the target's phone because yes, it can be a spyware without installation. Question: Can you spy on someone's phone without installing software? Spying on someone by tracking his phone activities becomes a necessity for monitoring and clarifying suspicion. The traditional way of spying on an Android phone is by installing a monitoring app on that target phone. However, it is not easy to get access to someone's phone easily. Besides, there is always a chance of the target person catching you red-handed installing the app. Moreover, the target person can find out the app on his phone and trackback to you from the account details. Therefore, most people are looking for ways to spy on someone's phone without installing any app. In this article, we will illustrate how to spy on Android phones without installing software. 1. Is It Possible to Spy on A Cell Phone Without Installing Software? Yes, it is possible to spy on a cell phone without installing any app physically. However, there could be limitations to parameters that you can monitor. If we are talking about spying on an Android smartphone or tablet remotely without installing any app, you will need to know the Google Account's credentials of the target person. If you want to spy on iPhone or iPad without installing any app, you will need to know the iCloud credential of the target person. If you cannot get the credentials from the target person directly, there is another way to opt for them. The process is called phishing, whereby you create a trap for the target person to fall into and give away the credentials unknowingly. You have to create a phishing page that looks exactly like the login page of Google Account or iCloud. You will send the link of your phishing page to the target person via a text message. The text message should be convincing enough to force the target person to click on the phishing link. Once he does, he will surely enter the Google Account or iCloud credentials thinking of the phishing page as the authentic page. We will now explain how to use the credentials to spy on Android phone without installing software free. 2. How to Spy on Mobile Without Installing Software? Spy on Android: Method 1: Timeline by Google With Timeline by Google, you can monitor the locations that the target person has traveled. It will show you on the maps the places the target person has visited starting from past years till today. For this function to work, the target person must have the internet connection turned on, and the location option enabled. Moreover, you should have the target person's Google account credentials. Step 1: Open the web browser and go to Google Maps. Step 2: Sign in with the target person's Google account credentials. Step 3: Go to the Menu on the top left side by clicking on the three-dash icon. Step 4: Click on Your Timeline option. This will show you the timeline along with the places visited. You can select any particular day to check the target person's whereabouts. Method 2: Android Device Manager With Android Device Manager, you can track the location of the target phone, lock the phone remotely and erase the target phone's data. From a spying perspective, only the tracking of the recent location of the target phone is useful. The rest are more for personal use or for causing a nuisance. Step 1: Open the web browser and visit Google.com/android/devicemanager. Step 2: Sign in with the target person's Google account credentials. Step 3: On the screen, you will see the target device's name along with its recent location. You can also see the options to play sound, secure device, and erase device data. Both these features let you spy on the target person only in a limited capacity. Getting Google account credentials may be tougher than installing an app on the target phone. Moreover, when you log in with the Google account credentials of the target person, he might get a notification that his account has been logged in from a new location. Therefore, it is advisable that you use a spying app to monitor all the activities of the target person. The best undetectable spy app for Android is KidsGuard Pro for Android. Buy Now View Demo Spy on iOS: iCloud Service With the iCloud service, you can get access to all the files and data the target person has backed up on his iCloud account. However, you should have the target person's Apple ID and password. Step 1: Open your web browser and visit www.icloud.com. Step 2: Sign in with Apple ID and password of the target person. You can check the mails, contacts, calendar, notes, reminders, location, and various other data. 3. Are The Websites Legitimate That Claim to Spy on Android? There are many websites that claim to spy on Android phones without installing any software. These websites are total scams as they just want to trick the users into buying their products. Most of these websites ask the users to establish a connection with the target phone or send an image to the target phone. These methods are totally flawed, and therefore, these websites are not at all legitimate. In the first method, you have to connect with the target phone through Bluetooth so that you can transfer the APK file of the company's app. However, such a file is easily detectable by the target person as the transferred files are shown on the screen. Instead, it is easier to get access to the target phone and install a legitimate spy app directly. In the second method, you have physical access to the target Android device. Open its web browser and visit the download link. Once the website opens, slide right to download the app on the target device. Step 4: Once download, tap on the APK file to start the installation. Follow the on-screen instructions to complete the installation process. Step 5: Once installation is over, open the app and log in with your account's credential and follow the on-screen instructions. Access Target Phone's Data Remotely Step 6: Come back on your phone or computer and log into your KidsGuard Pro account. Go to Dashboard, and you will be able to see all the data and files of the target phone with the device name. Note that it may take some time to sync the data initially. 6. Other Spying Apps for Android Here is the list of the other spying apps for Android phones. 1) FlexiSPY FlexiSPY is one of the most popular spying apps. Apart from the basic monitoring features, the app can stay hidden on the target phone. However, its advanced version is relatively expensive. Features: Check calls, messages, and contacts. Monitor social media activities. Check photos, videos, browser activities. Record keystrokes with the keylogger. Check the calendar, installed apps, emails. Compatibility: It is compatible with any Android device having Android 4 or above. Price: Lite edition costs \$29.95 per month, premium edition costs \$68 per month, and Extreme edition costs \$199 per quarter. 2) mSpy mSpy is another parental monitoring app. It has all the basic monitoring features. It also lets you block websites and apps. However, it lacks the call recording feature and some advanced features require rooting. Features: Check calls, contacts, and text messages. Read messages from social media apps. Track GPS location and set Geofence. View photos, videos, and email. View browser history and bookmarks. Block websites and apps. Capture live screenshots. Get alerts on triggers and cumulative reports. Compatibility: It is compatible with any Android device having Android 4 or above. Price: The basic edition costs \$29.99 per month, and the Premium edition costs \$16.66 per month. 3) XNSPY XNSPY is a renowned spying app. It has almost all the basic and advanced spying features. You can record calls as well as surrounding sounds. Moreover, you can take live screenshots and lock the device as well as wipe all data remotely. It is also the cheapest legitimate spying app available. Features: Monitor call logs, text messages, and voicemails. Track GPS location in real-time and set Geofence. Track the activities on social media apps. Read the conversations of the instant messaging apps. Read emails, check browser history and bookmarks. Record keystrokes with Keylogger. Compatibility: It is compatible with any Android device having Android 4 or above. Price: The basic edition costs \$4.99 per month, and the Premium edition costs \$7.49 per month. 4) Spyzie Spyzie is more of a parental control app than a fully spying app. Therefore, it lacks some of the advanced spying features. Yet, it is good enough for monitoring the target phone's activities easily. However, the device is relatively expensive. Features: Check calls, messages, browser history. Set geo-fencing and get alerts. Capture all keystrokes with keylogger. Check all social media activities and messages. Track live location as well as location history. Operates in the target phone in stealth mode. Compatibility: It is compatible with any Android device having Android 4 or above. Price: The basic edition costs \$39.99 per month, and the Premium edition costs \$49.99 per month. 5) Highester Mobile Highester Mobile is a basic spying app to spy on kids and employees. The remote control features are quite useful. Most importantly, its one-time fee structure is best suited for many. Features: Control phone camera remotely. Monitor calls, messages, and emails. Track all social media activities. View browser history and track GPS location. Check out saved photos and activities. Compatibility: It is compatible with any Android device having Android 3 or above. Price: You have to pay a one-time fee of \$69.99. 7. Why is KidsGuard Pro for Android Better? There is no spying app available through which you can monitor as many as 30 parameters of the target phone except KidsGuard Pro for Android. The remote controlling features like capturing live screenshots, photos, and recording calls that are not available in the other spying apps all in one place. Moreover, no other spying app can track as many social media apps as KidsGuard Pro for Android does. The user interface and overall installation process are suitable for non-technical persons to operate easily. If you purchase its annual plan, the monthly average pay will be merely around \$8, which is extremely cheap. All in all, it is a complete spying and monitoring app from all perspectives. Summary Hopefully, you have found the answer to your question "how can I spy on a cell phone without installing software on the target phone?" in our elaborate article. However, without installing software, monitoring is quite risky and not that fruitful. Therefore, we recommend you install a legitimate spying app on the target phone and track all phone activities remotely. The best monitoring app to buy is KidsGuard Pro for Android, and start monitoring on the target person instantly.
